

Approving One Big Customer Deal Still Takes 3–5 Days

ZUUS unifies Zoho + Microsoft 365 context so leaders approve in approximately 5 minutes. Search once. See the full story. Trigger AI actions.

FORGED BY INSIGHT. DRIVEN BY PRECISION.

The Approval Bottleneck

- ✓ RevOps and finance teams export data from multiple Zoho applications and chase down Microsoft 365 emails and documents across disconnected systems
- ✓ Zoho approval workflows route records efficiently, but they fail to surface critical cross-system context needed for informed decisions
- ✓ Result: a 3–5 day "Excel war room" for a single high-value approval, draining productivity and delaying revenue recognition

The ZUUS Approval Cockpit

Executive decision-makers need comprehensive context without the manual aggregation burden. ZUUS transforms the approval experience by delivering a unified workspace where Zoho and Microsoft 365 data converge seamlessly. Leaders access margin analysis, overdue invoice status, open support tickets, project risk indicators, and relevant email and document context—all within a single permission-safe interface that respects organizational security boundaries and identity protocols.

Unified Workspace

One interface that consolidates Zoho and Microsoft 365 data streams for comprehensive approval decisions

Permission-Safe Architecture

Identity-aware access controls ensure users only see data they're authorized to view across both systems

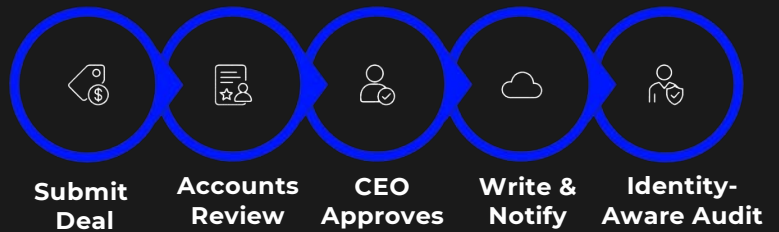

Automated Write-Back

Single-click decisions automatically update Zoho approval flows and notify relevant stakeholders

How ZUUZ Works

The ZUUZ interface presents executives with a comprehensive approval cockpit that aggregates critical data points from both Zoho and Microsoft 365 ecosystems, enabling rapid, informed decision-making.

Proven Results and Enterprise-Grade Security
